

Data Science Quiz 1

Each question carries 5 points

1. For the below observations, find the outliers using the boxplot technique. Show the steps.

10.2, 14.1, 14.4, 14.4, 14.4, 14.5, 14.5, 14.6, 14.7, 14.7, 14.7, 14.9, 15.1, 15.9, 16.4

2. A principal at school claims that the students in his school are of average intelligence. A mean IQ of 112.5 was obtained on 30 randomly chosen students of his school with standard deviation of 15. If the population mean is 100, state if principal's claim is acceptable. Explain.

3. Write the steps for using Singular Value Decomposition (SVD) as a feature selection algorithm.

4. **[Practical: Submit R/Python markdown file as pdf on google classroom]** Consider IRIS data. Ignore the class variable indicating flower types and perform a k-means clustering. Assume there are three clusters i.e., $k=3$. Now use SVD to visualise the data with real flower type identities and cluster identities. Contrast your findings and comment about efficacy of k-means on IRIS data.

5. A group of 10 foot surgery patients had a mean weight of 240 pounds. The sample standard deviation was 25 pounds. Find a confidence interval for a sample for the true mean weight of all foot surgery patients. Find a 95% CI. Use the below snippet of t-distribution table.

Degrees of freedom (ν)	Amount of area in one tail (α)							
	0.0005	0.001	0.005	0.010	0.025	0.050	0.100	0.200
1	636.6192	318.3088	63.65674	31.82052	12.70620	6.313752	3.077684	1.376382
2	31.59905	22.32712	9.924843	6.964557	4.302653	2.919986	1.885618	1.060660
3	12.92398	10.21453	5.840909	4.540703	3.182446	2.353363	1.637744	0.978472
4	8.610302	7.173182	4.604095	3.746947	2.776445	2.131847	1.533206	0.940965
